EXPERIMENT 14

Extending a Zoho Creator Application with a Custom Function in Deluge

Application: Loan Application & Pre-Screening Management

Aim

To extend the Loan Application & Pre-Screening Management application with code by creating a custom function in Deluge and calling it from a workflow.

Procedure

1. Sign in to Zoho Creator, open the application and click the **Workflow** tab at the top, then click the **Functions** tab. (Figure 1)

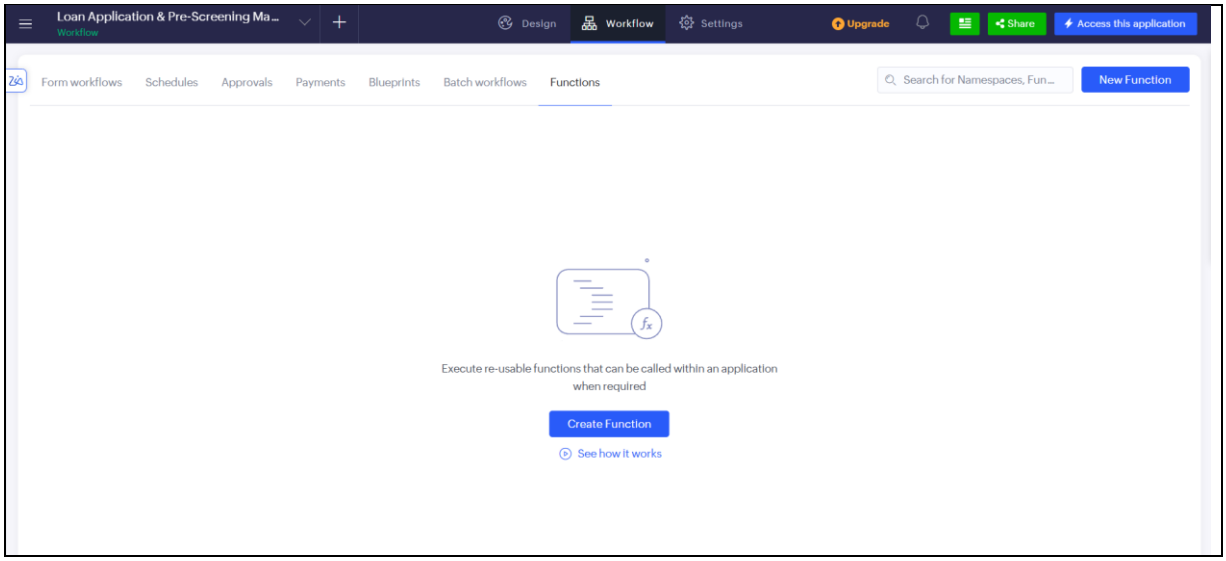

Figure 1: Functions tab in the Workflow section

2. Click **Create Function** (or **New Function**). Give the function the name **getIncomeCategory**, set the return type to **string**, and add one argument named **income** of type **int** (Figure 2)

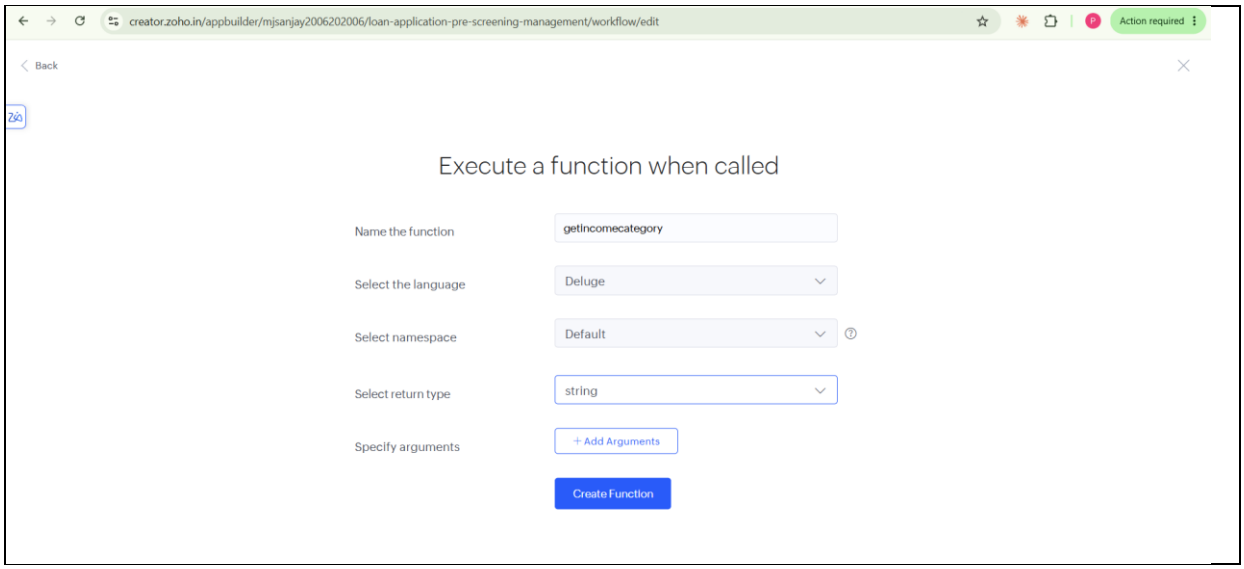

Figure 2: Function name, return type and argument

3. In the script editor, type the code below inside the function and click **Save**. The function returns Low for less than 25000, Medium for less than 50000, and High for 50000 or more. Take a screenshot of the saved function. (Figure 3)

```
if(income < 25000)
{
   category = "Low";
}
else if(income < 50000)
{
   category = "Medium";
}
else
{
   category = "High";
}
return category;
```

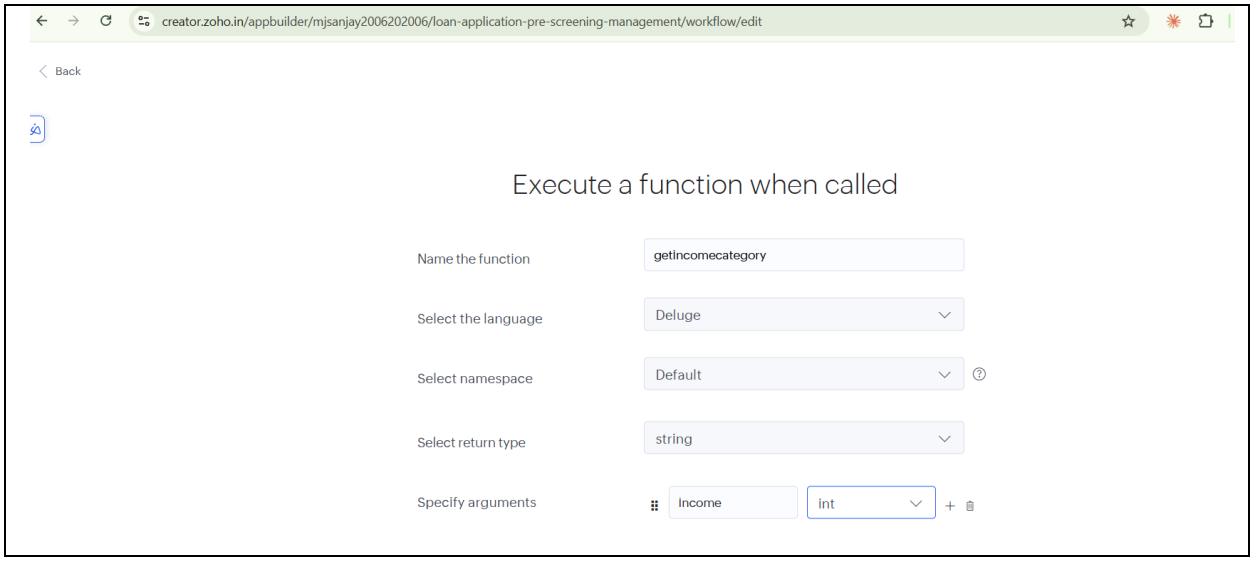

Figure 3: getIncomeCategory function saved with its script

4. Click the **Workflow** tab and open the workflow **Send_To_Zoho_CRM**. Click **Add New Action**, select **Deluge script** and type the two lines below. They call the custom function. Take a screenshot. (Figure 4)

```
category = thisapp.getIncomeCategory(input.Monthly_Income);
info category;
```

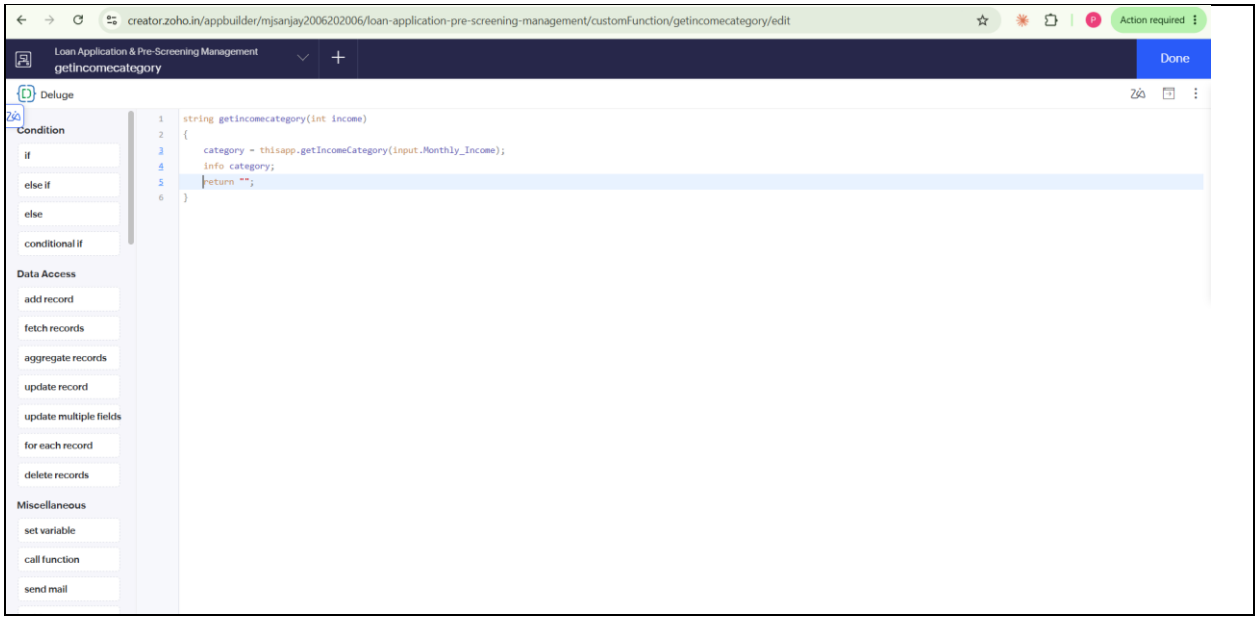

Figure 4: Custom function called in the workflow script

5. Click **Save** and then **Done**.

Result

A custom function named getIncomeCategory was created in Zoho Creator. It takes the monthly income and returns Low, Medium or High. The function was called from the workflow Send_To_Zoho_CRM with the field Monthly_Income, and the script was saved.
