EXPERIMENT 6

Deluge Scripting and Workflows with Testing and Debugging in Zoho Creator

Application: Loan Application & Pre-Screening Management

Aim

To write a Deluge script in a workflow that validates the Monthly_Income field of Loan_Application_Form in the Loan Application & Pre-Screening Management application, and to check the workflow.

Procedure

1. Open the application in Zoho Creator and click the + button at the top. The Create New Component menu opens (Figure 1). Choose **Workflow**.

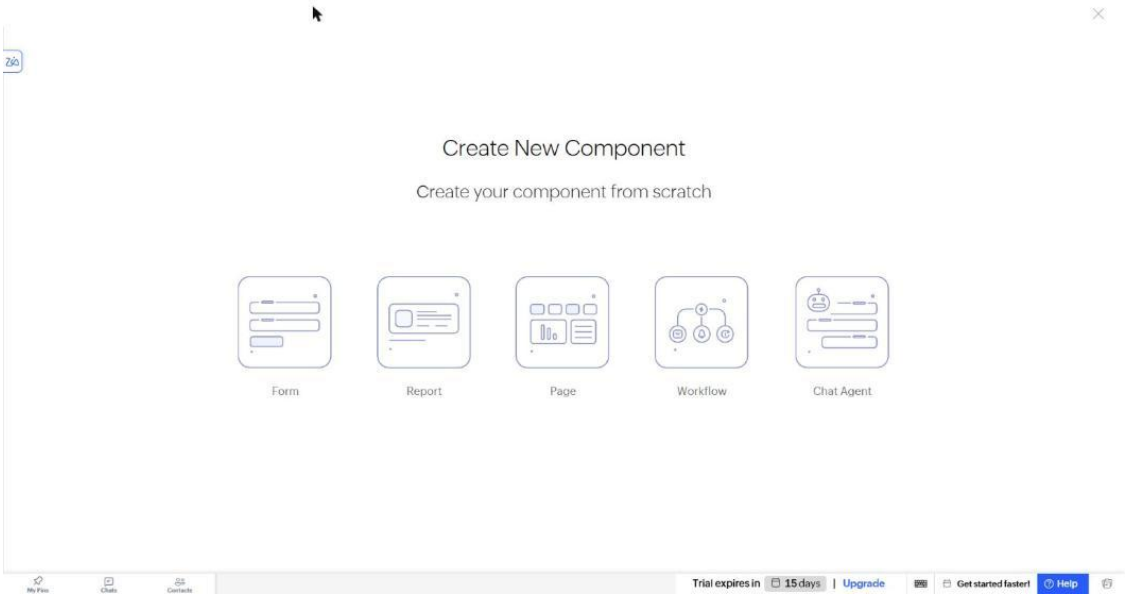

Figure 1: Create New Component menu

2. Select **On a form event** as the way to run the workflow (Figure 2).

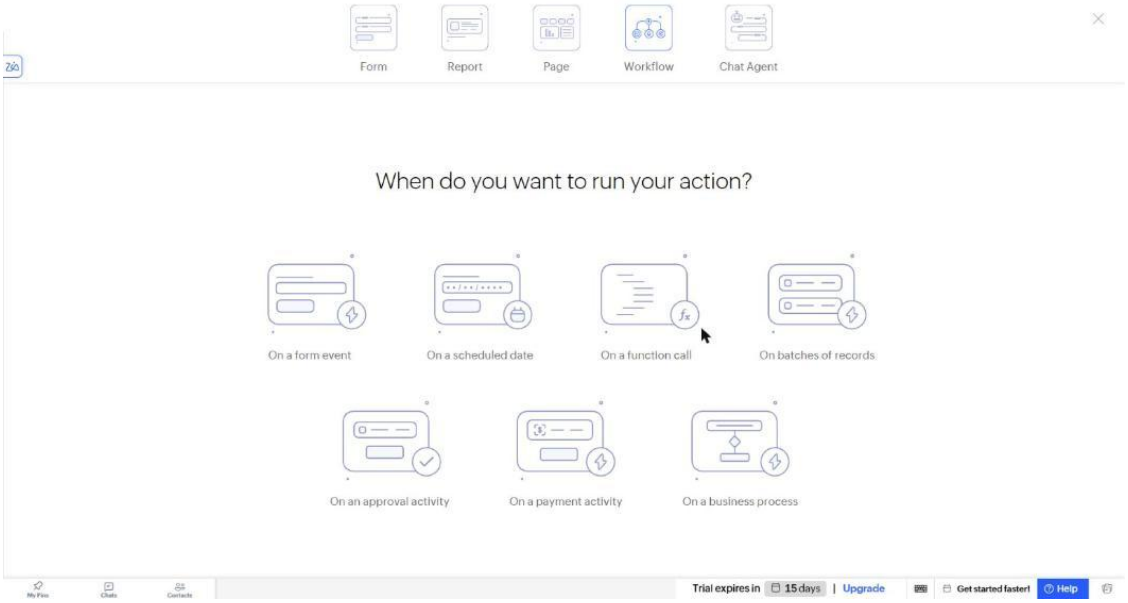

Figure 2: Workflow trigger options

3. Choose the form **Loan_Application_Form**, set the record event to **Created**, set the trigger to **Validations on form submission**, and name the workflow **Validate_Income** (Figure 3). Click **Create Workflow**.

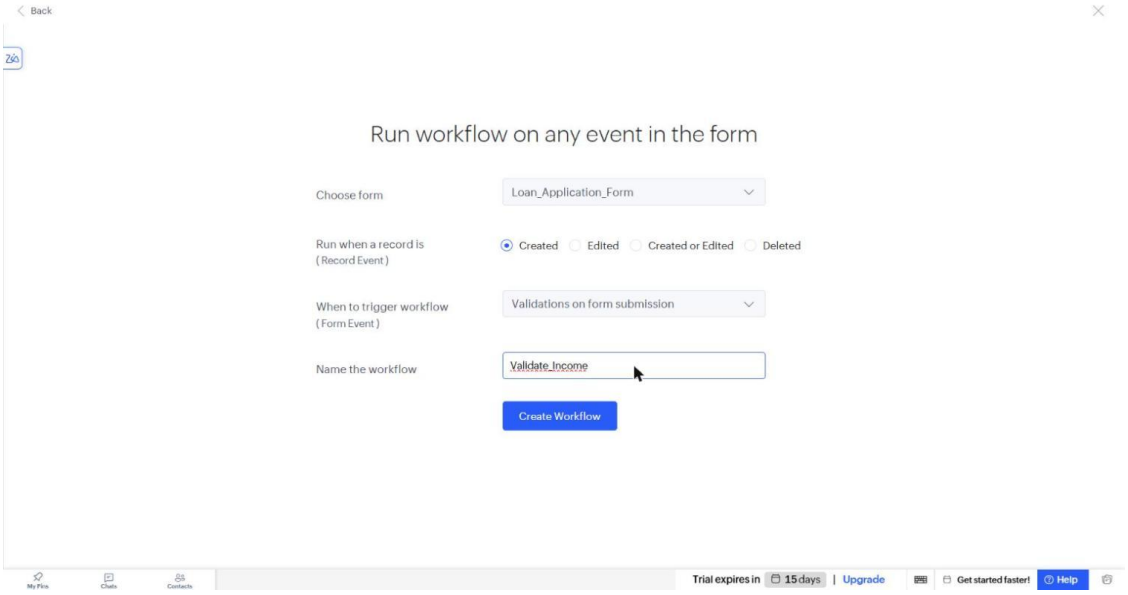

Figure 3: Workflow details entered

4. The workflow builder opens with the path Loan_Application_Form > Created > Validations on form submission > Validate_Income (Figure 4). Click **Add New Action**. The Deluge Script editor opens.

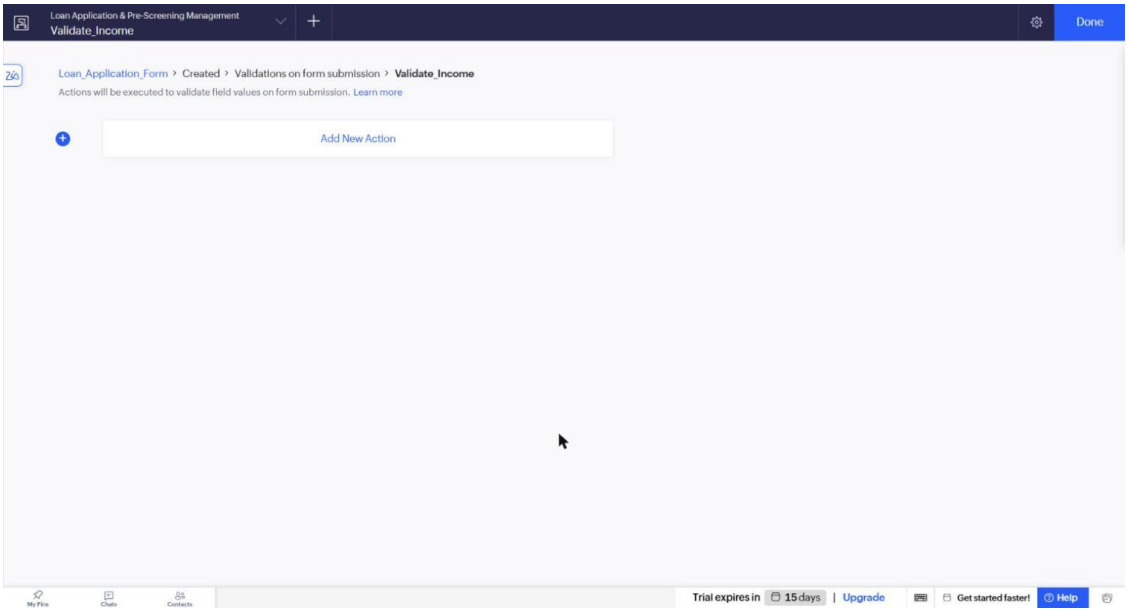

Figure 4: Workflow builder

5. In the editor, type the script below (Figure 5) and click **Save**.

```
if(input.Monthly_Income < 10000) {
    alert "Monthly income must be at least 10000";
    cancel submit;
}
```

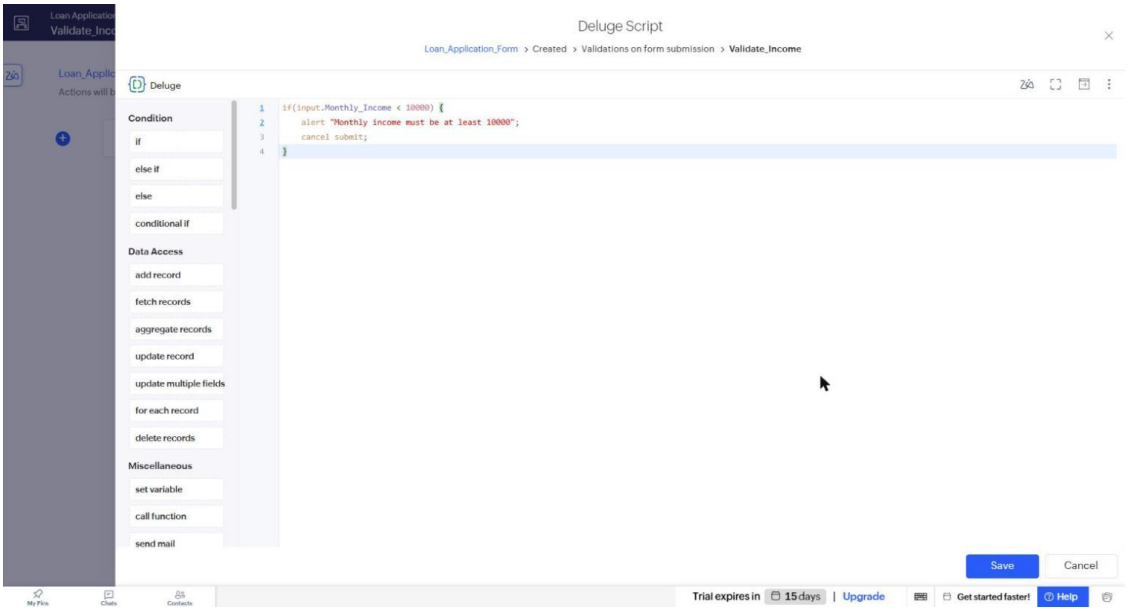

Figure 5: Deluge script in the editor

6. Close the editor. The script is shown as an action under Execute without condition (Figure 6). Click **Done**.

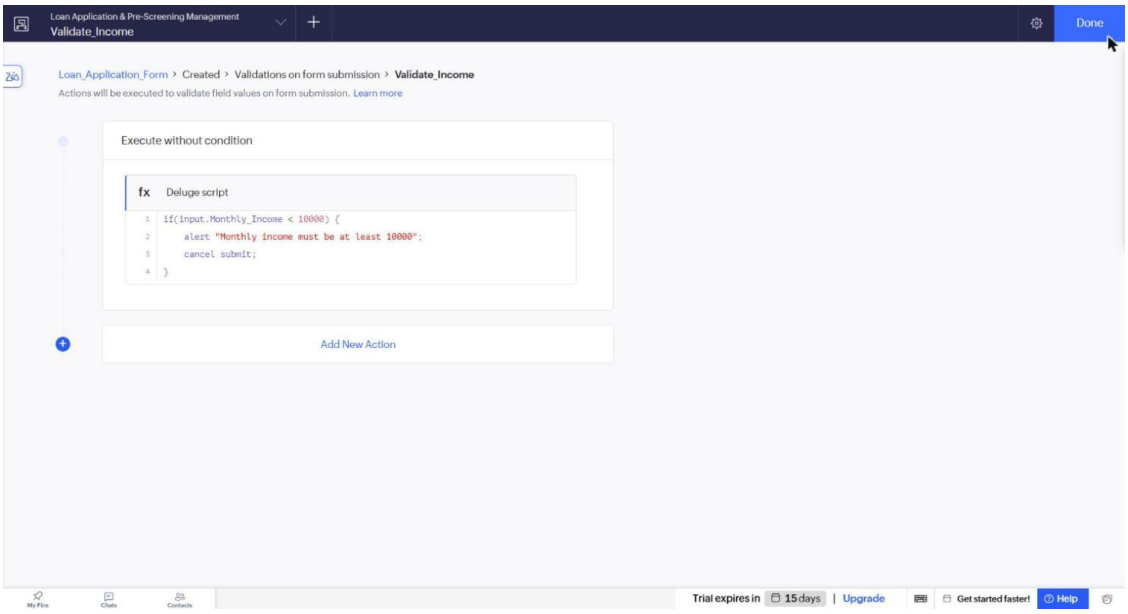

Figure 6: Script saved as an action

7. The Workflow tab lists Validate_Income for Loan_Application_Form with the event Created > Validations on form submission, with 1 Action and the status Enabled (Figure 7).

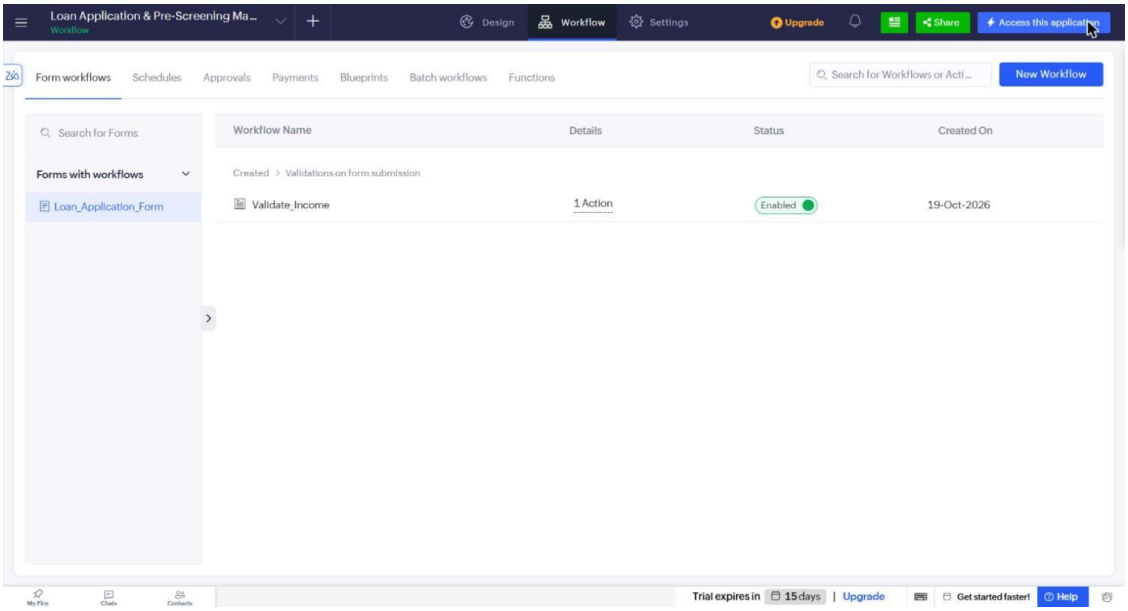

Figure 7: Workflow list

8. Debugging: on the first attempt, pressing the Escape key to close the auto-complete list also closed the editor, and the script was not saved. The script was typed again without using the Escape key, and it was then saved as shown in Figure 6.

Result

A workflow named Validate_Income was created on Loan_Application_Form. Its Deluge script shows the alert "Monthly income must be at least 10000" and cancels the submission when Monthly_Income is less than 10000. The workflow was saved and is Enabled with 1 Action. The form was not submitted with test values, so the alert was not seen in operation.
