EXPERIMENT 7

Integrating Zoho Creator with Another Zoho Service Using Connections and APIs

Application: Loan Application & Pre-Screening Management

Aim

To integrate the Loan Application & Pre-Screening Management application with another Zoho service (Zoho CRM) using a connection, so that a submitted loan application creates a contact in that service.

Procedure

1. Click the + button at the top, choose **Workflow** and select **On a form event**. Choose the form **Loan_Application_Form**, set the record event to **Created**, set the trigger to **Successful form submission**, and name the workflow **Send_To_Zoho_CRM** (Figure 1). Click **Create Workflow**.

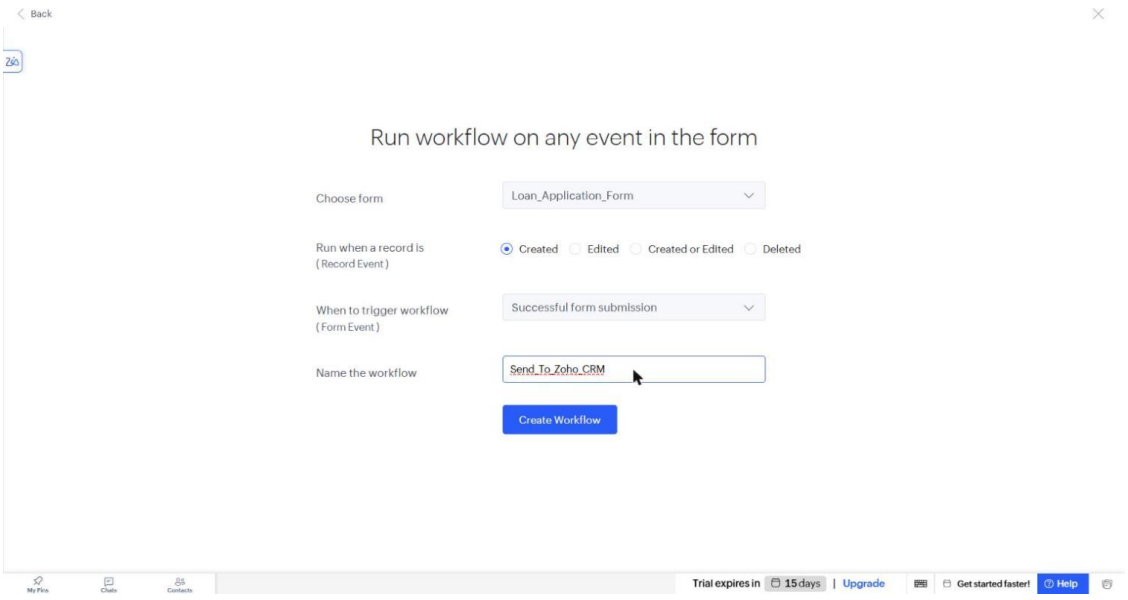

Figure 1: Workflow details entered

2. In the workflow builder, click **Add New Action**. The action types Notification, Data access, Integrations and Deluge script are shown (Figure 2).

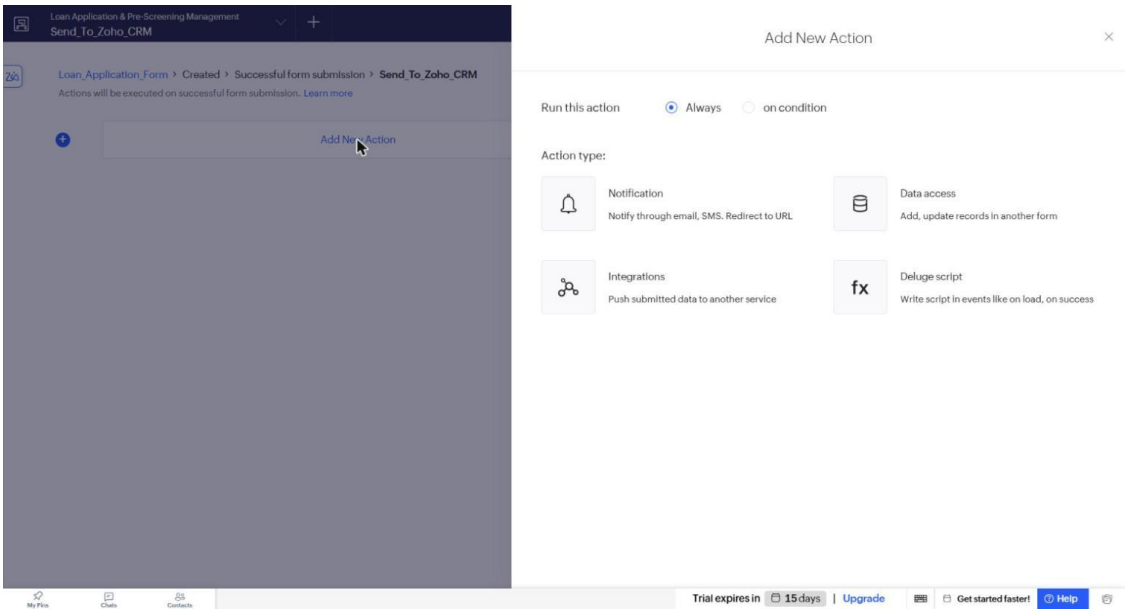

Figure 2: Add New Action

3. Click **Integrations**. The connectors QuickBooks, SalesForce, Zoho CRM, Zoho Recruit and SAP OData are listed (Figure 3). Select **Zoho CRM**.

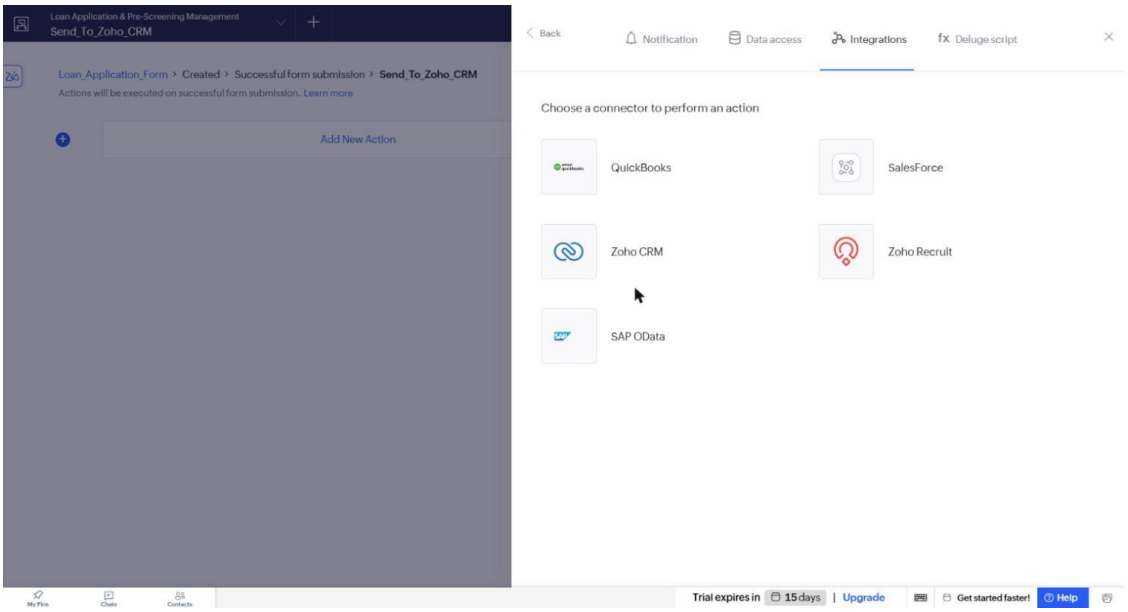

Figure 3: Integration connectors

4. The Zoho CRM screen opens with the Action list (Figure 4).

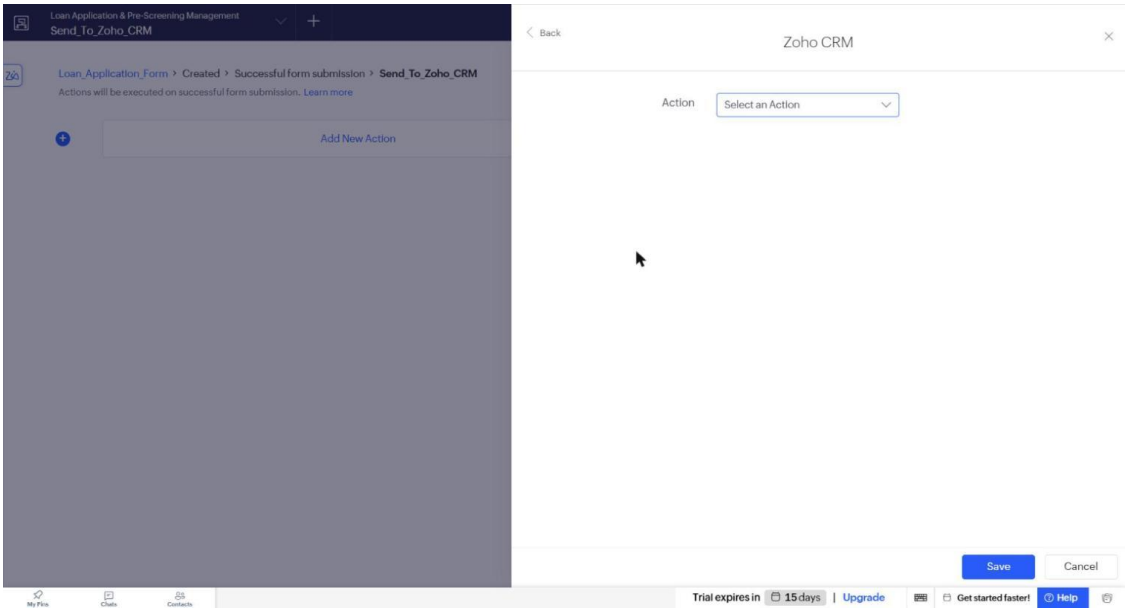

Figure 4: Zoho CRM screen

5. Open the Action list and select **Create Contact** (Figure 5).

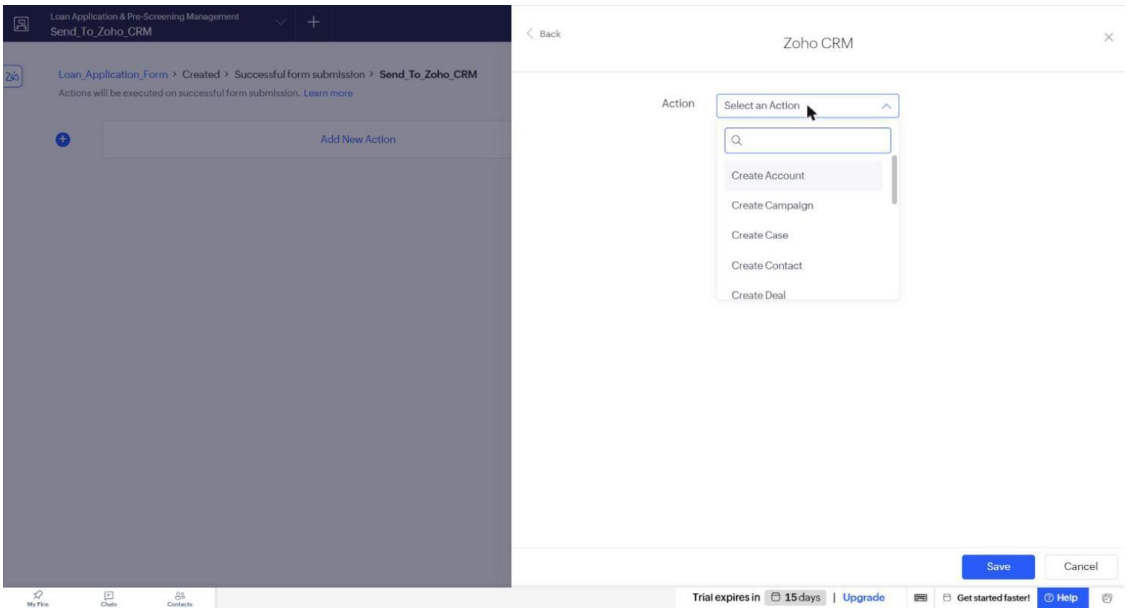

Figure 5: Action list

6. The Connection field appears with the text Select a Connection (Figure 6). Click the + button beside it.

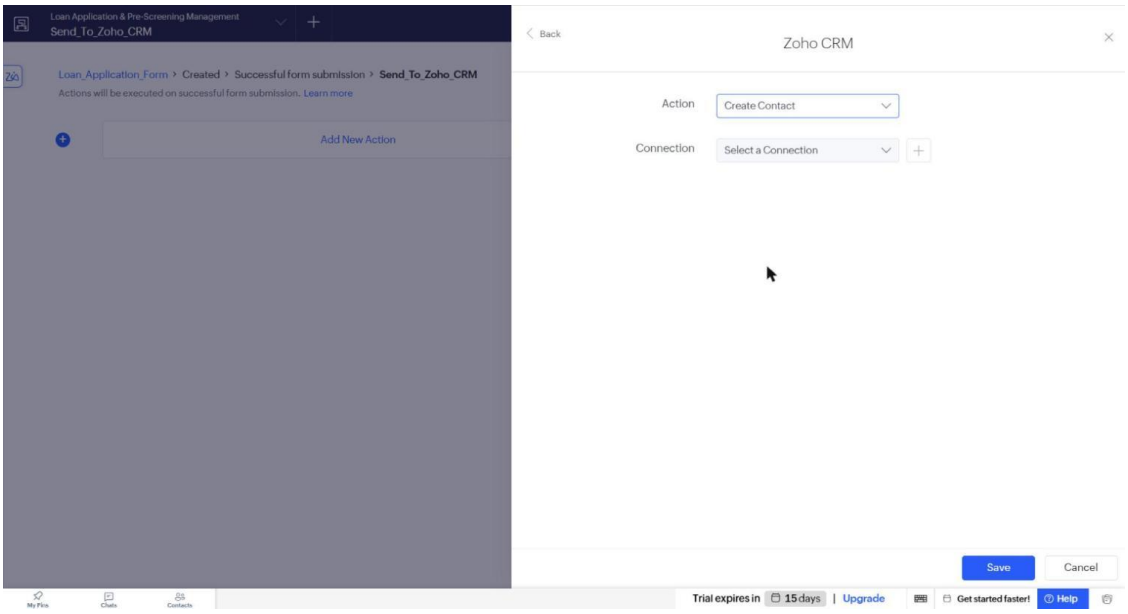

Figure 6: Create Contact selected and Connection field shown

7. The Add Connection window opens. The Connection Name is Zoho CRM Connection, the Authorization Access is Administrators only and the Connection Mode is Quick Connect (Figure 7). Click **Create And Authorize**.

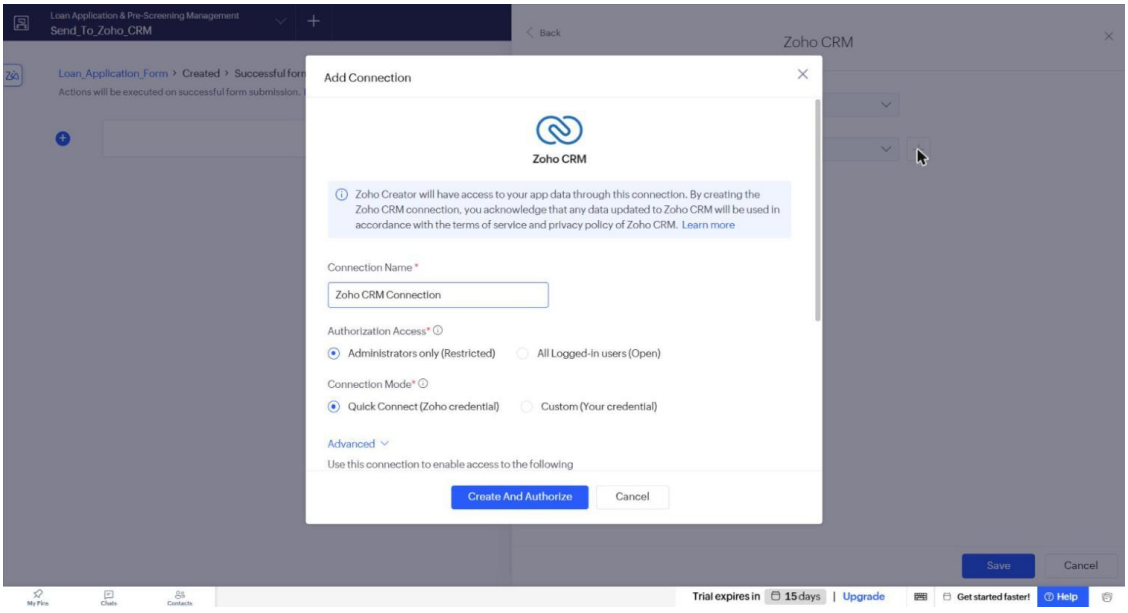

Figure 7: Add Connection window

8. A Zoho Accounts window opens to ask for permission. For CRM it shows the message "Cannot grant these permissions as you don't have access to CRM." (Figure 8). The

Accept button is disabled until two check boxes are ticked. The permissions were not accepted and the window was closed.

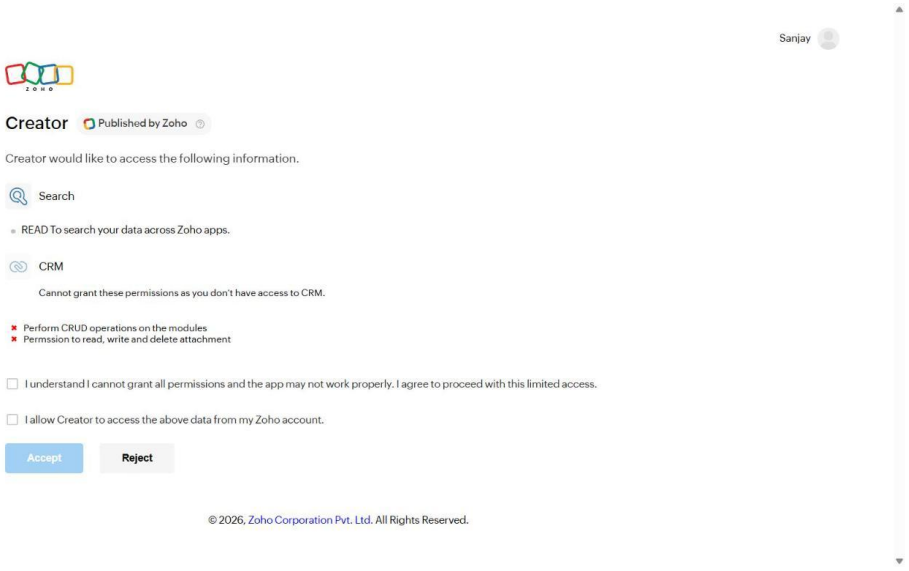

Figure 8: Authorization window

9. Back in Zoho Creator, the connection Zoho CRM Connection is listed as an unauthorized connection, and the message "The authorization has failed due to an interruption in communication with the external service. Please try again." is shown (Figure 9). The action was not saved.

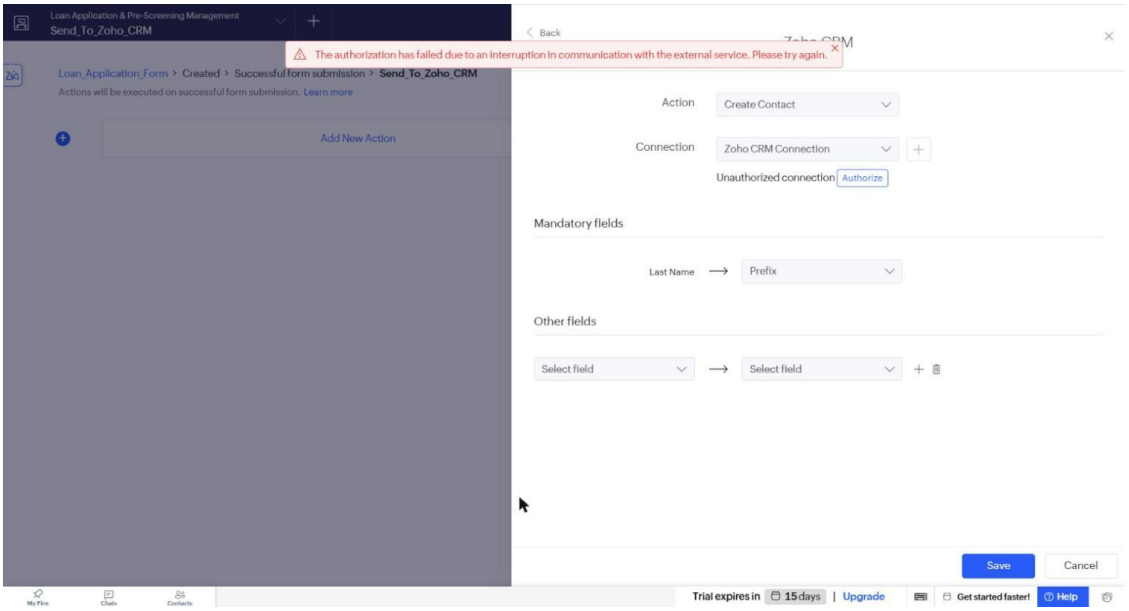

Figure 9: Authorization failed

10. The Workflow tab lists Send_To_Zoho_CRM with the event Created > Successful form submission, with 0 Actions and the status Enabled (Figure 10).

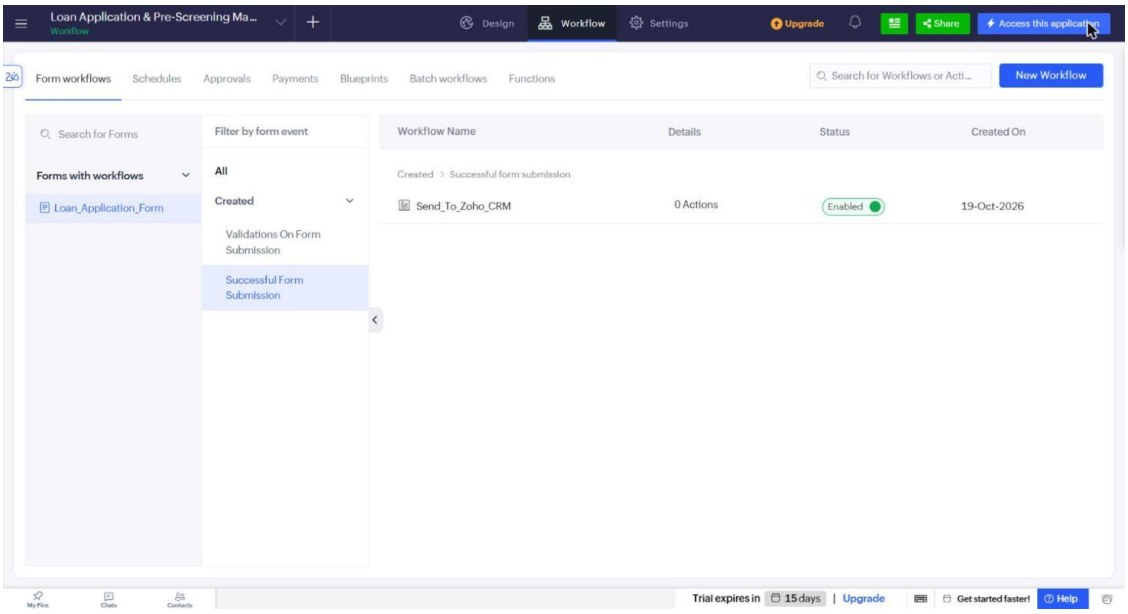

Figure 10: Workflow list

Result

The workflow Send_To_Zoho_CRM was created on Loan_Application_Form, and the Zoho CRM Create Contact action and a connection named Zoho CRM Connection were set up as far as the authorization step. The connection could not be authorized, because the Zoho account used shows "Cannot grant these permissions as you don't have access to CRM." As a result, the Create Contact action was not saved, the field mapping was not done, and no contact was sent to Zoho CRM. The workflow has 0 actions. This experiment is not completed.
